

detecting an object touching the touch screen;  
detecting the location of the object on the touch screen;  
detecting x and y coordinates of a point of contact of the object on the touch screen;

detecting when the object is no longer touching the touch screen and measuring a time duration from the time of detection of the object first touching the touch screen until the time of detection of the object no longer touching the touch screen; and

determining inputted data based on the detected location of the object on the touch screen and the measured time duration.

---

9. (Amended) A wireless apparatus comprising:

a touch screen for inputting data;  
a touch detector for detecting an object touching the touch screen;  
a location detector for detecting the location of the object on the touch screen;

another touch detector for detecting when the object is no longer touching the touch screen and a time duration measuring unit for measuring a time duration from the time of detection of the object first touching the touch screen until the time of detection of the object no longer touching the touch screen; and

a data determination unit for determining inputted data based on the detected location of the object on the touch screen and the measured time duration, and

B2  
contd

wherein the wireless apparatus receives configuration information from a server.

19. (Amended) A method of selecting a particular function on a wireless electronic device having a touch screen, the method comprising:

receiving configuration information at the wireless electronic device from a server;

detecting an object touching the touch screen;

detecting the location of the object on the touch screen;

B3

detecting when the object is no longer touching the touch screen and measuring a time duration from the time of detection of the object first touching the touch screen until the time of detection of the object no longer touching the touch screen; and

determining the particular function of the electronic device based on the detected location of the object on the touch screen and the measured time duration.

28. (Amended) A wireless electronic device having an apparatus for selecting a particular function of the electronic device using a touch screen, the electronic device comprising:

B4  
cont

wireless connection interface for receiving configuration information from a server;

a touch detector for detecting an object touching the touch screen;

a location detector for detecting the location of the object on the touch screen;

another touch detector for detecting when the object is no longer touching the touch screen and a time duration measuring unit for measuring a time duration from the time of detection of the object first touching the touch screen until the time of detection of the object no longer touching the touch screen; and

a data determination unit for determining the particular selected function based on the detected location of the object on the touch screen and the measured time duration.

B5 38. (Amended) The device of claim 9, wherein the server receives the configuration information from a configuration tool manager of a management server.

39. (Amended) The method according to claim 1, wherein the server receives the configuration information from a configuration tool manager of management server.

B6 40. (Amended) The method according to claim 19, wherein the server receives the configuration information from a configuration tool manager of management server.

41. (Amended) The apparatus according to claim 28, wherein the server receives terminal configuration information from a configuration tool manager of management server.
